## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's amendment filed on October 12, 2007 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Gerber, pn 4,653,362.

Gerber discloses a method of cutting sheet members with every step of the claimed invention including:

a) stacking a plurality of sheet members (e.g., see Fig. 2) having air impermeability;

b) fixing the sheet members by vacuum suction (e.g., see col. 3, lines 42-49);

c) locally heating (e.g., by frictional heating as described in col. 5, lines 31-42, and by supplemental heating as described in col. 5, line 43 - col. 6, line 9, which can fuse the sheets together as described in col. 6, lines 24) a seam allowance of pattern pieces, or a region outside the seam allowance, near a cutting line by frictional heat (e.g., col. 5, lines 31-42) between the sheet members and a knife or a punch of a cutting head, to weld the sheet members together vertically to fix upper and lower sheet members; and

d) cutting (e.g., using blade 30) the sheet members welded in step c along a predetermined cutting line along the pattern pieces (it is noted that the recitation "welded in step c" only positively indicates which sheet members are to be cut, but does not positively recite nor require the order of occurrence of the welding and cutting steps).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gerber 4,654,362.

Gerber discloses a method of cutting sheet members with almost every step of the claimed invention but lacks:

[claim 11] wherein the local heating step includes locally heating along a region slightly outside the cutting line at a plurality of positions for each piece;

[claim 12] wherein the local heating step includes locally heating in the seam allowance inside the cutting line at a plurality of positions for each piece.

However, to provide local heating along a region inside or slightly outside the cutting line, for example by making the cut with the disclosed knife along a region inside or slightly outside the cutting line would have been an obvious matter of design choice based on a desired cutting design and/or pattern and therefore obvious to one having ordinary skill in the art.

### ***Response to Arguments***

6. Applicant's arguments filed October 12, 2007 have been fully considered but they are not persuasive. It is respectfully submitted that, contrary to applicant's remarks, the prior art still meets the claimed invention as described in further detail in the corresponding prior art rejection above.
